

Native memory and preference prediction

no history 30/30 valid; full history 29/30 valid; native memory 30/30 valid

Prediction error with each information source

Memory effect varies across users

Mean difference +0.095; exploratory 95% interval [-0.062, +0.249]

Positive values mean greater error with extracted memory.

Development only. One local 4-bit model; 438 scheduled targets. Bars use available valid users.
Numerical penalties selected on development data; the paired comparison uses 29 common users.
